

APPLICATION / REF. JOB-LUNAR_ENERGY-2026

14 August 2026
Lunar Energy
San Francisco, USA

Operations BI Engineer

Lunar Energy • Remote

Dear Hiring Team,

The dashboard is not the deliverable. The operating decision is. That is how I work as a Decision Engineer.

As a Supplier Quality Engineer at Magna International, I operate between global suppliers, quality evidence, and operational risk. I convert fragmented inputs into clear ownership and automated decision views. The SQE BI command center I developed traces activity across 6 control modules and 4 lifecycle gates, highlighting critical components and triggering automated alerts before open issues turn into launch risks.

That experience translates directly to the challenges at Lunar Energy: mapping business workflows, structuring KPIs, designing automated exception queues, and providing leadership with defensible operating signals rather than passive reports.

01 / SEE THE OPERATION Decision-Ready Visibility I define OEE, scrap, lead times, and throughput around the decisions they must trigger. At Stellantis R&D, that discipline reduced BOM anomaly cycle times from 2 days to under 3 minutes.	02 / CONTROL EXCEPTIONS Owner, Risk & Next Action At Magna, I built an SQE BI and workflow system aligning owners, PPAP/DVP evidence, critical parts, and automated alerts across international supplier programs.	03 / VALIDATE & OPERATE Evidence-Led Solutions My portfolio showcases verified models: M5 demand forecasting simulation, last-mile route control towers, and AI-agent reliability diagnostics.	
< 3 min validated BOM cycle previously 2 days	6 modules SQE control system nomination to SOP	3 systems public portfolio cases with evidence bounds	C1 English TOEIC 855 global collaboration

I would welcome a conversation about the operational workflows and decision systems Lunar Energy wants to structure next. You can inspect my live decision systems and evidence trails in my portfolio.

Sincerely,
Rida Melkaoui
